zum Jahrbuch der Hamburgischen Wissenschaftlichen Anstalten. XXXIV. 1916.

# Meteorologische Beobachtungen

auf der

# Hamburger Sternwarte in Bergedorf

im Jahre

1916

Herausgegeben vom Direktor
Dr. R. Schorr

In Kommission bei Otto Meissners Verlag Hamburg 1917. Das vorliegende Heft enthält die Zusammenstellung der im Jahre 1916 auf der Hamburger Sternwarte in Bergedorf ausgeführten meteorologischen Beobachtungen. Ihre Ausführung, Bearbeitung und Anordnung erfolgte nach den gleichen Grundsätzen wie in den früheren Jahren, auch hinsichtlich der benutzten meteorologischen Instrumente ist keine wesentliche Änderung eingetreten. Es darf deshalb zur Erläuterung der nachstehenden Zusammenstellung auf die Darlegungen in der Einleitung zu den "Meteorologischen Beobachtungen der Hamburger Sternwarte in Bergedorf in den Jahren 1910 und 1911" verwiesen werden.

In den Monats- und Jahresübersichten des vorliegenden Heftes sind außer den Mittelwerten des Jahres 1916 auch diejenigen angegeben, die sich aus der ganzen Bergedorfer Beobachtungsreihe von 1910 bis 1916 ergeben.

Die Ablesungen 9°, 12°, 4° sowie die stündlichen Aufzeichnungen der Bewölkung bei Nacht wurden in wöchentlichem Wechsel von den Wächtern Kiso und Lieckfeld, die Ablesungen 7° in wöchentlichem Wechsel von dem Observatoriumsgehilfen Beyermann und dem Maschinisten Rohde ausgeführt. Die Beobachtungen 2° sowie die Bedienung der Registrierapparate besorgte die technische Hilfsarbeiterin Frl. Köhncke, an Sonntagen auch Dr. Messow, der Observatoriumsgehilfe Beyermann, Frl. Rühl, Frl. Thormeyer und Frl. Jmgart.

Die Bearbeitung der meteorologischen Tagebücher wurde von Frl. Köhncke erledigt. Die Leitung des meteorologischen Dienstes führte der Observator der Sternwarte Prof. Schwaßmann mit Unterstützung von Dr. Messow.

Bergedorf 1917 November 30.

Der Direktor der Sternwarte R. Schorr.

# Stunden-Beobachtungen

12a, 4a, 7a, 2p, 9p

### 1916

#### Erläuterung zur nachstehenden Zusammenstellung:

Zeit: Mittlere Zeit Bergedorf ( $\varphi = 53^{\circ}28'46''$ 7,  $\lambda = 40^{m}57^{\circ}74$  ö. v. Gr.) für Stunden-

beobachtungen, sonst Mitteleuropäische Zeit (124 = Mitternacht, 12P = Mittag).

Luftdruck: Millimeter, bezogen auf o° C und Normalschwere, gültig für die Meereshöhe

von 35.153 m über Preußisch Normal Null.

Lufttemperatur: Celsius-Grade nach dem Assmannschen Aspirations-Psychrometer P in

französischer Hütte B.

Grenzwerte der Lufttemperatur: 2 m über Erdboden nach Grenzwertthermometern in englischer Hütte A;

am Erdboden nach frei aufgestellten Grenzwertthermometern.

Feuchtigkeit: Absolute in Millimetern, relative in Hundertteilen.

Windstärke: Staffel o bis 12. Bewölkung: Staffel o bis 10.

Niederschlag: Millimeter; die Tagesmenge bezieht sich auf die Zeit von 7ª bis 7ª.

Sonnenschein: Stunden.

Mittelwerte: Bei Luftdruck, Windstärke, Bewölkung: Mittel = \frac{1}{5} (12\frac{a}{2} + 4\frac{a}{2} + 7\frac{a}{2} + 2\frac{p}{2} + 9\frac{p}{2}),

bei Lufttemperatur und Feuchtigkeit: M.\* =  $\frac{1}{4}$  (7a + 2p + 2 × 9p).

Januar
